## Theoretical Question 2: Creaking Door

 MARKING SCHEME| a1) 0.6 | Understood in $T_{0}, A$ calculation that the motion is purely harmonic | 0.1 |  |
| :---: | :---: | :---: | :---: |
|  | Result for $T_{0}$ | 0.2 |  |
|  | Result for $A$ | 0.3 | Correct amplitude $u-v_{0}$ of $\dot{x}-0.1$ <br> Deducing $A$ (using either direct division by $\omega$ or energy conservation in the moving frame) -0.2 |
| a2) 0.4 | Sinusoidal shape with enough periods | 0.1 |  |
|  | Starts at a positive slope | 0.1 |  |
|  | Starts at $x>0$ | 0.1 |  |
|  | Positive mean value of $x$ | 0.1 | Judge sparingly, penalize only in obvious cases |
| b) 1.2 | Enough periods | 0.1 |  |
|  | Starts at $v=0$ (stick) | 0.1 |  |
|  | Has finite segments with $v=0$ (stick phases) | 0.3 |  |
|  | The "humps" (slip phases) are always above the horizontal segments | 0.2 | Always to the same side - 0.1 <br> Always above - 0.1 |
|  | Continuity of $v$ between the different segments | 0.1 |  |
|  | Slope (acceleration) discontinuity between the horizontal segments (stick) and the humps (slip) | 0.1 |  |
|  | $u$ is drawn below the maximum of $v(t)$ | 0.3 |  |
|  | Penalty for clearly unreasonable shape of the humps (very asymmetric, contain straight lines etc.) | -0.3 |  |
| c) 0.5 | Correct result | 0.5 | Wrote the formal integral for $\langle x\rangle-0.1$ |
| d) 2.4 | Writing $T=t_{\text {stick }}+t_{\text {slip }}$ | 0.1 |  |
|  | Finding the detachment offset $x_{1}=\left(\mu_{s}-\mu_{k}\right) m g /$ $k$ (or finding $2 x_{1}$ ) | 0.3 |  |
|  | Finding the stick time $t_{\text {stick }}=2 x_{1} / u$ | 0.2 | Correct except for factor-of-2-0.1 |
|  | Understanding that $t_{\text {slip }}$ is part of a harmonic period $T_{0}$ | 0.2 |  |
|  | Finding the phase corresponding to $t_{\text {slip }}$ | 1.1 | Partial credit for the amplitude of the harmonic motion - 0.3 |
|  | Final result for $t_{\text {slip }}$ | 0.2 | Correct except for factor-of-2-0.1 |
|  | Final result for $T$ | 0.3 | Correct except for factors-of-2-0.2 Otherwise, no credit for propagating errors. |
| e) 2.4 | Understanding that at $u_{c}$, the box sticks back to the floor at the equilibrium of the harmonic motion | 0.4 |  |
|  | Understanding that at $u_{c}, t_{\text {stick }} \ll t_{\text {slip }}$ | 0.4 |  |

|  | Writing correct equations for $u_{c}$ | 1.2 | Partial credit for correct equations involving the <br> amplitude $A$ of the harmonic motion or the <br> detachment phase $\varphi$, without finding them -0.4 |
| :--- | :--- | :--- | :--- |
|  | Final answer | 0.4 |  |
|  | f) $\mathbf{1 . 0}$ | Relation between $\tau$ and $\alpha$ | 0.4 |
| Relation between $\alpha$ and $\theta$ | 0.4 |  |  |
|  | Final answer | 0.2 | Any expression which reduces to the official one <br> in the limit $\Delta r \ll r$ will be accepted. |
| g) $\mathbf{1 . 5}$ | Understanding that $t_{\text {stick }} \gg t_{\text {slip }}$ | 0.2 | 1.0 |
|  | Correct expression for the result | Any expression which reduces to the official one <br> in the limit $\Delta r \ll r$ will be accepted. |  |
| Penalty for factor-of-2 (when not propagated) - |  |  |  |
| 0.2 |  |  |  |
| Partial credit for using $t_{\text {stick from part (d) }}$without taking the limit $t_{s t i c k} \gg t_{\text {slip }}-0.3$ |  |  |  |
|  | Correct numerical result | 0.3 | A numerical result without an expression will not <br> receive credit. <br> If the expression was acceptable but is different <br> from the official one, the result will be graded <br> according to the student's expression. |
